

**COME HOME  
TO COPPER**

# Copper pipework for discerning self builders

Visitors to the National Self Build & Renovation Centre can now request their copy of *Copper Pipework Services – A Specifier's Guide*. The copper display at the centre has been provided by the UK Copper Board and it focuses on the versatility, reliability and recyclability of copper pipework.

## One material, multiple uses

Strong, flexible and easy to assemble, copper is used in every part of domestic pipework – from water, heating, gas, solar thermal and oil to fire sprinkler systems. And all the parts in copper systems are interchangeable with tube and fittings from other manufacturers, so you never need to worry about sourcing components.

## Proven Performance

Copper pipework services have been in widespread use for years. Copper pipes come with proven performance and pedigree – over 4 million miles of copper pipework has been installed in the UK in the last century. Installing copper is easy and completely hassle-free.

## Recyclable and sustainable

- ❑ 100% recyclable, with no loss in properties
- ❑ Most recycled plumbing material
- ❑ Recycled for at least 10,000 years
- ❑ Recycling uses just 15% of the energy used to mine and produce new copper
- ❑ It helps conserve fossil fuels and reduce CO<sub>2</sub> emissions
- ❑ Recycling helps meet growing demand for copper and preserves natural resources
- ❑ Almost half of the copper demand in Europe is now met with recycled copper

The Centre, located in Swindon, provides advice, support, information and materials for self build and renovation projects. Visitors to the Centre can view products from ground works to roofing and all stages in between, including services and finishes.
